GOOGLE CLOUD NEXT '26 | LAS VEGAS | APRIL 22 TO 24, 2026 | BOOTH #7501

One campaign page. Two audiences. CTAs written as answers.

How 66degrees showed up at Google Cloud's flagship event, and what I did differently from our usual event sequence.

01

A campaign page, not a registration page

Our event template is a hero, a sidebar and one form. Next needed a solutions grid, a sessions list, a leaders grid and an FAQ, with two routes in: register for the booth or request a meeting.

02

Two audiences, two storyboards

Existing clients and Googlers read the same event differently. I mapped intent for each (why they come, why they skip), then wrote three invites per track. Anyone who registers drops out of the sequence.

03

Every invite ends on a question

Instead of a pitch and a button, the email asks one question and the CTAs are the answers, the way Gemini suggests follow up prompts. Email 1 began with three CTAs in the storyboard and shipped with two.

04

Zero scroll, mobile first

Each invite is 60 to 90 words. One recipient gets a maximum of three invites a week apart, then only a logistics reminder. Reminders carry a second ask: bring a peer.

TAHA SIDDIQUI | CONTENT ENGINEER, 66DEGREES

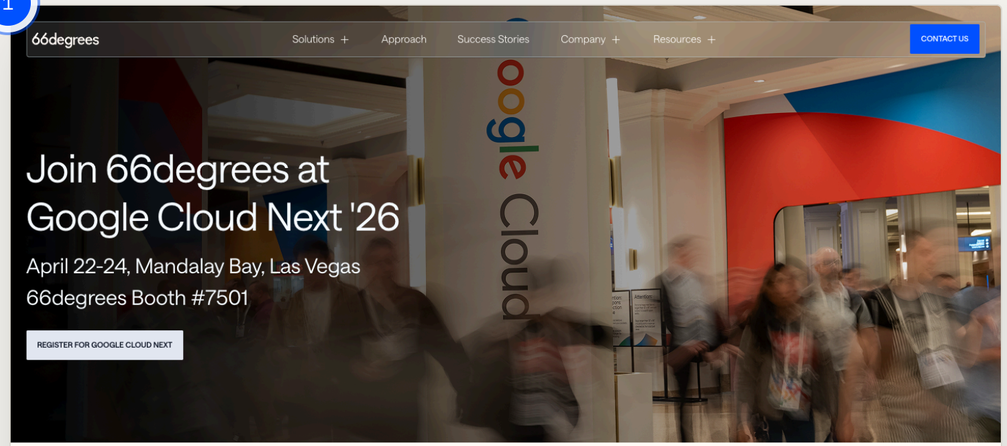

PAGE SCREENSHOTS FROM 66DEGREES.COM, NAMES AND FACES PIXELATED

THE PAGE

Built for a three day presence, not a single RSVP

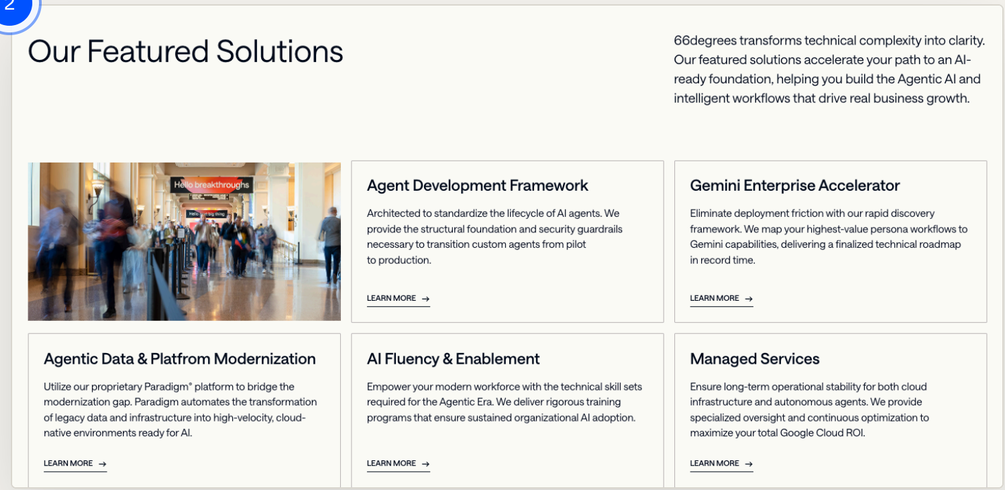

I drafted the first copy for the page and its structure. Final edits, design and build by the 66degrees web team.

1

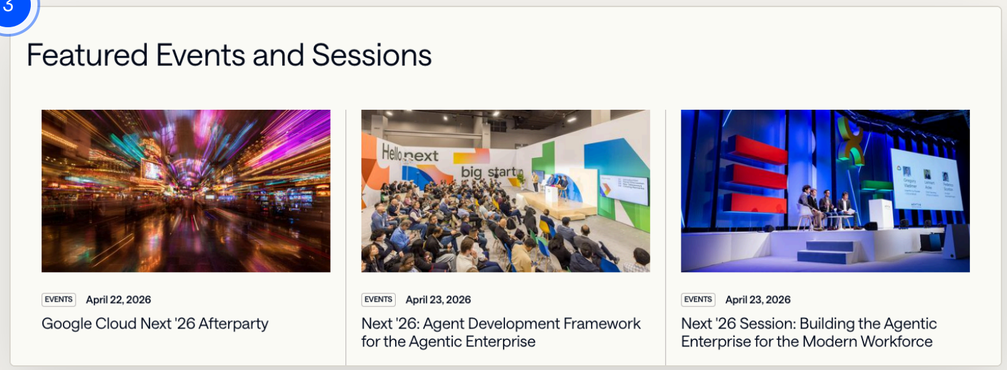

1 **Hero.** Dates, venue and booth number in the first fold, one primary CTA. The second route, Request a meeting, sits on the next block and on the leaders grid.

2

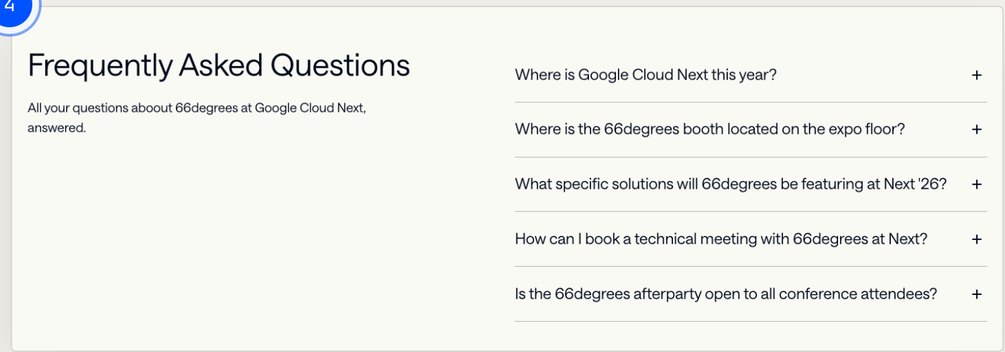

2 **Featured solutions grid.** Six solutions, each with a Learn more link, so the page answers "what will you show me" before anyone asks.

3

3 **Sessions list.** The afterparty and two speaking sessions as dated cards.

4

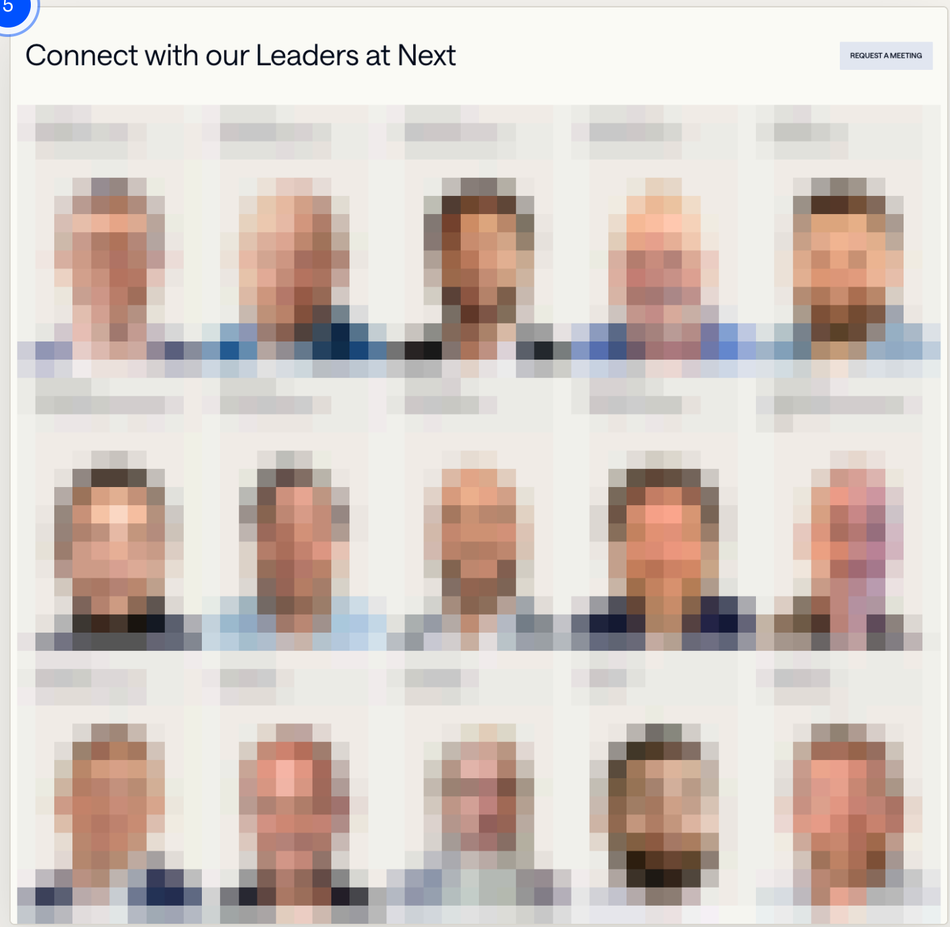

4 **FAQ.** Five questions a visitor actually asks: where, which booth, which solutions, how to book, who can attend the afterparty.

THE DIFFERENCE, SIDE BY SIDE

Leaders grid on the campaign page. One form on the afterparty page.

5

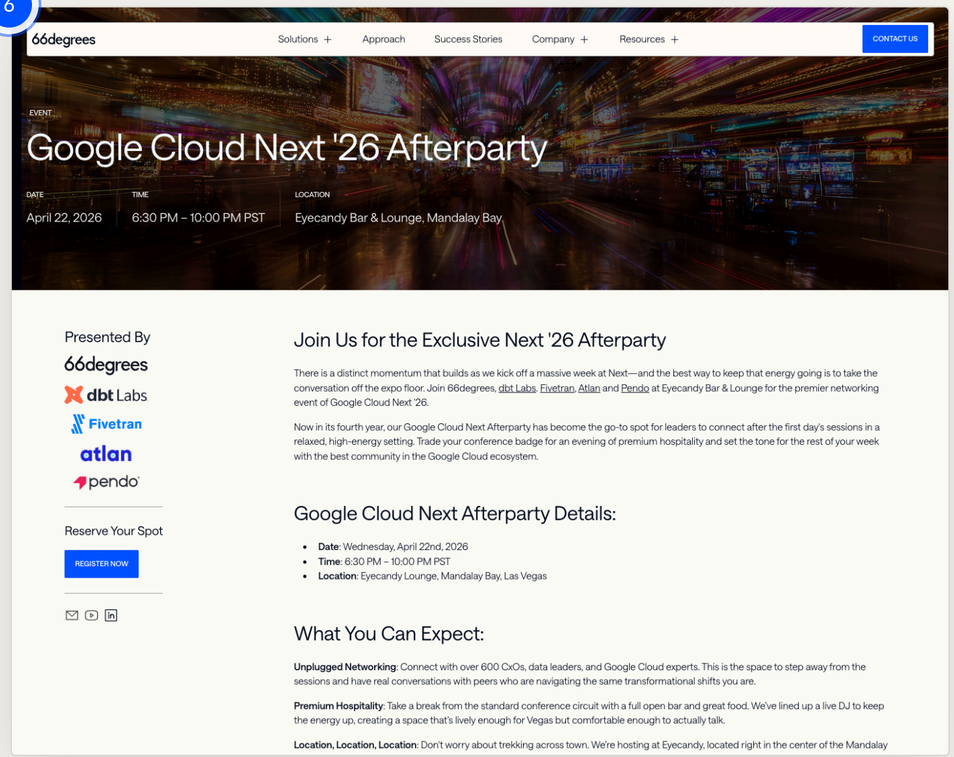

5 **Leaders grid.** 18 leaders with a Request a meeting button. Names and faces pixelated here.

6 **Afterparty page.** The standard event template: hero, Presented By, one form.

\+ Two pages, two intents: value by day at the booth, relationships by night at the afterparty. Every invite links to both.

6

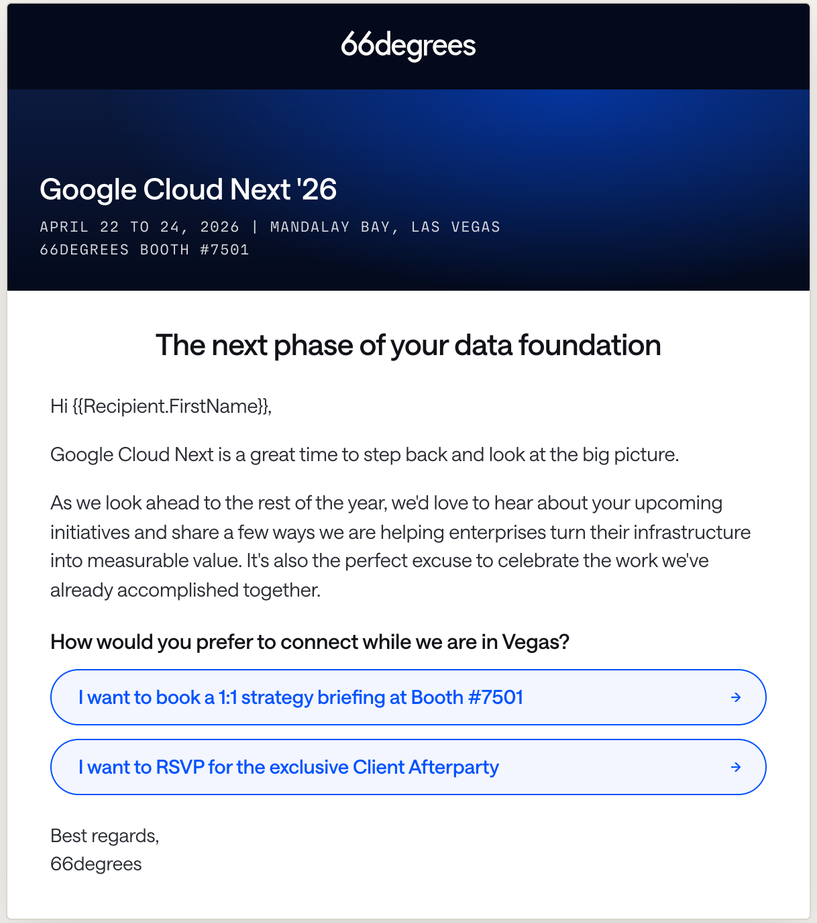

THE CTA PATTERN

Ask one question. Make the buttons the answers.

The same way Gemini offers suggested follow ups, we end each invite on a question and give two clickable answers. The reader picks a route instead of being told one.

STORYBOARD	Email 1, clients, started with three CTAs: book a 1:1 at Booth #7501, view the sessions, RSVP for the afterparty. The copy shipped with one question and two answers. Sessions moved to the campaign page.	
CLIENTS 1	How would you prefer to connect while we are in Vegas?	I want to book a 1:1 strategy briefing at Booth #7501 I want to RSVP for the exclusive Client Afterparty
CLIENTS 2	Where should we look for you?	Save my VIP spot at the Afterparty I will just meet your team during the day at Booth #7501
CLIENTS 3	What works best for your schedule next week?	I will add Booth #7501 to my floor map I want to grab a final spot for the Afterparty
GOOGLERS 1	How should we connect during the event?	Let us meet at Booth #7501 to discuss joint accounts Let us connect over drinks at the Partner Afterparty
GOOGLERS 2	How would you like to spend your time with us?	Put my name on the Partner Afterparty guest list I will just drop by Booth #7501 between my sessions
GOOGLERS 3	Where is the easiest place to find you next week?	I will swing by Booth #7501 on the floor I will see you at the Partner Afterparty

Clients, invite 1, copy as drafted. Subject: The next phase of your data foundation. Layout shown as the answer button block.

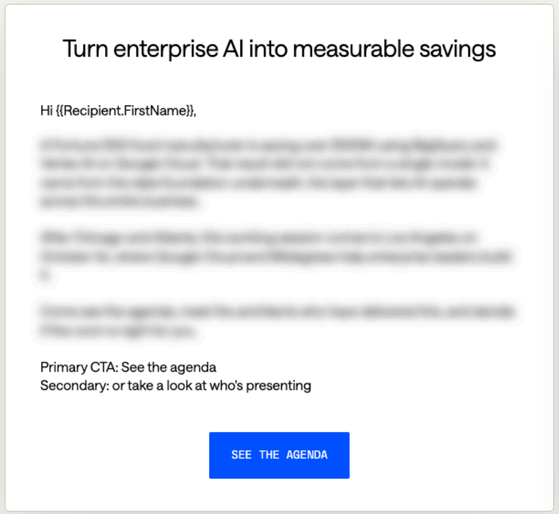

From my planning note, 20 March: "Ask them what they want, so the CTA itself is the answer to the question we asked." My work: the intent matrix, both storyboards, all six invites. The answer button block is a team template.

THE HABIT BEHIND IT

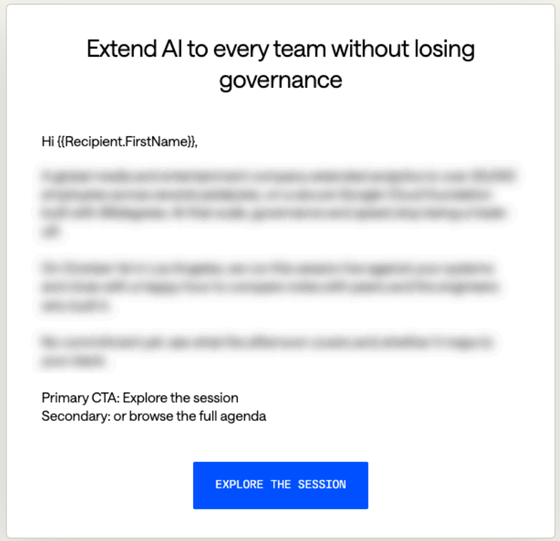

Two routes in, and a CTA that counts the room down

Invites I wrote for two 2026 executive sessions. Body copy blurred, CTAs left as sent to design.

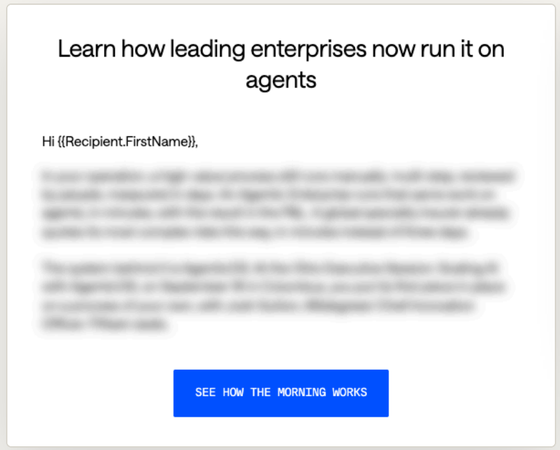

LOS ANGELES, INVITE 1

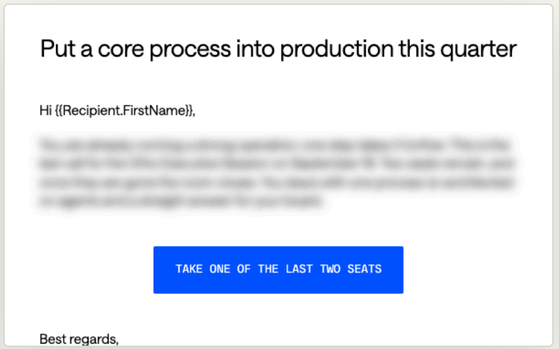

LOS ANGELES, INVITE 2

OHIO, INVITE 1

OHIO, INVITE 4

A **Primary button plus a secondary text link.** "See the agenda" with "or take a look at who's presenting". "Explore the session" with "or browse the full agenda". Rule I hold: two CTAs side by side never go to the same URL.

B **The CTA carries the scarcity.** Across four Ohio invites the copy counts fifteen seats, eight, four, then "Take one of the last two seats". No urgency words, just the number.

Reminders ask for one more person. Next '26 afterparty reminder, one week out: "Should you wish to bring your peers along, please feel free to add them to the roster." A registrant is the cheapest route to the next registrant.

Why two, not three. A zero scroll email has room for one question. Two answers keep the choice honest; a third turns it back into a menu.

WHAT THE SEQUENCES DID

Clicks and attendance are the signal. Opens are shown, with a caveat.

10.8%

Click to open rate, Ohio executive session invites 1 and 2, against a 9.8% IT and tech benchmark

2.5%

Unique CTR, HCLS Boston executive session, against a 2.0% IT and tech benchmark

86%

Show rate, HCLS Boston: 30 of 35 registrants attended

CAMPAIGN	DELIVERED	OPEN RATE	UNIQUE CTR	REGISTERED / ATTENDED
Accelerating Compliant AI for HCLS, Boston, 9 Jul Registration page and four invites	6,860	15.3% total opens basis	2.5%	35 / 30
Building Better Agents: Low Code vs Pro Code, webinar, 6 May Four invites	7,044	26.2% unique	1.31% click to open 4.98%	55 / 29
Ohio Executive Session, Columbus, invites 1 and 2 Event later cancelled, no attendance to report	4,535 / 2,942	17.4% / 10.8% total opens basis	1.35% / 2.01%	n/a
Benchmark, Campaign Monitor, IT and technology email Published industry average			2.0% click to open 9.8%	

On open rates. Apple Mail Privacy Protection pre loads images and registers opens the reader never made, so open rates run high and are not comparable across lists. Clicks and attendance are the numbers I manage to. Sources: Looker Studio email report (HCLS), campaign email report (Low Code vs Pro Code), 2026 Event Tracker (Ohio, HCLS opens). Next '26 send metrics are not mine to claim, so they are not shown.
